

ALUSFERA FL52

16x8m

Alusfera is another way of using LIBERA, again starting from standard components with the addition of a few special accessories. The horizontal roof of one configuration may become a quarter sphere in another to accommodate a whole stage, with the performance of a “real” stage, including large applied loads, large roofed areas, and very small transport volumes.

Dimensions	16 x 8 m
Height*	8 m
Main truss	LIBERA FL52
Towers	//
Uniformly distributed load UDL **	4500 kg ≈
Chain hoists	//
Total weight	2000 kg
Volume	11 m ³
Set-up time & number of workers	5 hrs / 4 w

* Height suggested according to the dimensions of the roof system.

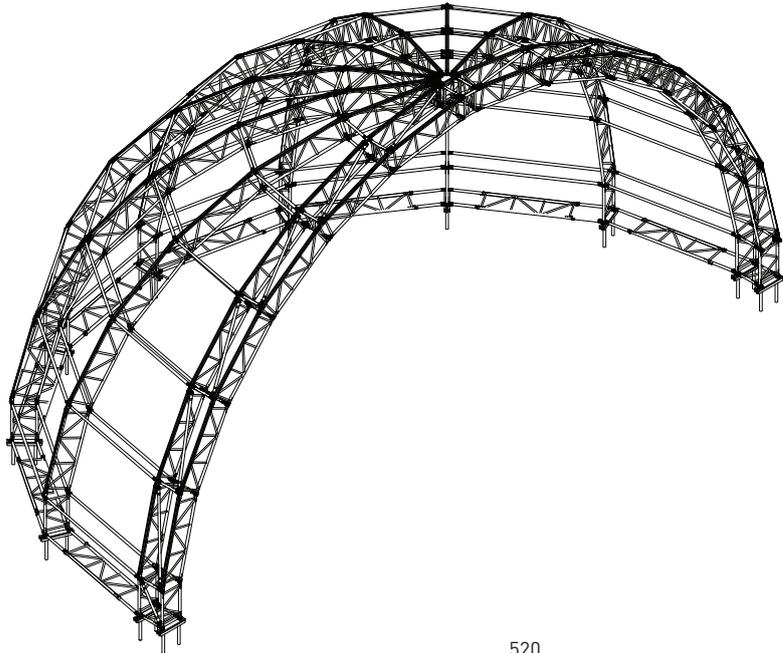

** Indicative loading data for use in environments without wind. For details and further information, please consult the technical specifications or contact our engineering department or distributors.

For details and further information, please consult the technical specifications or contact our engineering department or distributors.

The examples and data shown on these pages are necessarily indicative owing to the extreme variability of the conditions in which the structures may be assembled. Each installation must be provided with a suitable quantity of ballast, as shown on the product certificates.

This line of structures was created in compliance with European standards.

Use of these systems is governed by laws which vary according to the country they are assembled in. They must be put together in compliance with the local regulations in force.

ALUSFERA FL52

16x8m

It is a very impressive structure that may be used purely as part of the scenery, even without roofing sheets.
